Product Description

24x41x10 Metal Garage with Dual Frame-Out Openings

The 24x41x10 Garage is a prefabricated steel building designed for residential vehicle storage, equipment protection, and general-purpose covered space. With dual frame-out door openings, walk-through access doors, and a window included, this garage layout is well-suited for property owners needing organized enclosed storage with convenient accessibility.

Built with 26 gauge steel sheeting and engineered for 170 MPH Florida wind certification, this garage is designed for locations where structural compliance and weather resistance are important considerations.

Best For

- Vehicle storage
- Multi-vehicle parking
- Lawn equipment and tool storage
- Residential property storage
- Light workshop or hobby space
- Utility and recreational equipment storage

What Fits Inside

The 24x41 footprint provides a long enclosed layout that can accommodate multiple vehicles, depending on vehicle size and interior configuration. The dual 8x8 frame-out openings allow for flexible garage door installation options and organized access points.

The interior space may also be used for:

- Side-by-side vehicle parking
- Small trailer or ATV storage
- Shelving and storage organization
- Workbench placement
- Seasonal equipment storage

The included walk-through doors help improve daily accessibility without opening larger garage entrances.

Build Quality & Materials

This [prefabricated metal garage](#) is constructed with 26 gauge steel sheeting designed for durable exterior coverage and low-maintenance ownership. The structure is wind certified for up to 170 MPH Florida requirements, making it suitable for areas with stricter wind-load standards.

Engineer drawings are available for permitting and planning requirements where needed.

Key construction highlights include:

- 26 gauge steel exterior sheeting
- Wind certified up to 170 MPH Florida standards
- Engineered drawings available
- Prefabricated steel construction
- Frame-out garage door openings for customizable access

Customization Options

This building includes several customization and planning options based on your property requirements.

Available options include:

- Custom sizes available
- Custom layout configurations available
- 15+ color options
- Garage door customization through frame-out openings
- Permitting service available
- Engineer drawings available

Is This Garage the Right Size?

A 24x41 garage is a practical option for property owners needing more than basic single-vehicle storage while maintaining a manageable footprint on residential property.

This size may work well if you need:

- Space for multiple vehicles
- Extra storage beyond standard garage capacity
- Dedicated equipment organization
- Flexible enclosed storage space

If you require additional height for larger vehicles, RV storage, or expanded workshop space, a taller or wider garage configuration may be worth considering.
